

Grovax

Grovax is a liquid blend of natural ingredients designed to improve the intestinal health of monogastrics. By enhancing various physiological and microbiological processes in the gut, Grovax ensures optimal intestinal health. Its natural antimicrobial activity prevents microbial overgrowth, reduces infection pressure, and improves manure quality. This results in better technical performance, especially in terms of feed efficiency and daily growth. Grovax seamlessly fits into a no-antibiotic ever (NAE) strategy, making it a perfect choice for those looking to enhance the health and productivity of their livestock naturally.
